Blister Card Packaging Assistant that Improves the Manual Process for any Retail Pharmacy

BlistAssist™ is an innovative medication blister card packaging assistant that offers accuracy, traceability, and security. It offers a revolutionary software-driven solution that improves the manual preparation and verification of single or multi-med blister cards. The system is designed for faster inspection by the pharmacist due to the simplicity of single card inspection. Engineered to meet safety and traceability needs, it addresses all the requirements of a pharmacy's card filling operation.

Accuracy & Speed

A light-guided panel improves the tedious, time consuming, and labor intensive manual card filling process. Barcode verification and the unique pill-by-pill image-driven workflow greatly enhances accuracy and verification, reducing potential for errors. BlistAssist monitors the card filling process, allowing the user to step away and easily resume production.

Traceability

BlistAssist features the unparalleled ability to track lot numbers and expiration dates in manually-prepared blister cards. Operator activity is tracked via a login and password.

Safety

"Layer-by-layer" verification creates a quick and convenient verification process and ensures that no cards are missed. The system stores verification images for archival purposes. Pharmacists have the unique flexibility to conduct final verification remotely.

- Light-guided pill-by-pill placement
- Individual pill-by-pill view of each blister
- Automatically transfers patient medication profiles, no double entry
- Barcode verification and pill-by-pill image-driven workflow ensures the correct medication and strength
- Card-level lot number and expiration date tracking
- Inspection image archive available in case of error claim
- Easy to learn

- Simple solution ensures accurate preparation and reduces errors
- Software monitors workflow progress, allowing the user to easily resume production after an interruption
- Traceability via required login with password
- Compatible with most commonly used cold-seal blister cards, for example: Dispill®, FlexRx™ Light, Qube and SureMed®
- Small footprint

Specifications for BlistAssist® System

- Dimensions W=23" L=22.75" H=26"
- Weight 60 lbs.
- Dispensing Capacity 2 blister cards can be filled in the same workflow
- Card Fill Rate Average 20 minutes per multi-med card
- Communications Ethernet connection to workstation(s) & pharmacy management software
- Internal Temperature/Humidity Same as pharmacy space
- Internal Cleanliness Easy to clean
- Workstation All-in-one PC with 2 card set-up, monitor, keyboard, mouse, "smart" filling station
- Verification Layer-by-layer, vision-assisted remote inspection
- Software Proprietary software and firmware

Specifications for BlistAssist Controller (built-in)

- Operating System Microsoft Windows 10 Professional, 64-bit
- Database Microsoft SQL Server
- Power 110 volt A/C, 20 amp

BlistAssist Field Performance Data

- Cost Reduction Layer-by-layer, vision-assisted verification means far less pharmacist time needed for final inspection of multi-med cards
Light-guided filling ensures accuracy and allows technicians to walk away and come back to filling without losing track of their workflow

Custom Pharmacy Layout Services

- Workflow Optimization Integrates RxSafe systems' automation into existing pharmacy space
