ViralGuardRx™

*Retail POS COVID-19 / Coronavirus Protection Shield
for Essential Services*

Are you an essential service that wants to take extra measures to protect the health of your employees and customers during the coronavirus outbreak? The ViralGuardRx is a great option to create a physical barrier at point-of-sale counters.

By placing this protective shield at walk-up spaces, cash registers, and other high traffic areas, it can help reduce the risk of viral and bacterial transmission, including COVID-19. If you're a pharmacy, healthcare facility, bank, or retail store front, consider adding the ViralGuardRx to your business environment. Your employees and customers will appreciate the extra layer of protection.

ViralGuardRx is easy to self-install. The HIPAA-compliant talking port provides improved audibility while aiding in the prevention of disease transmission. The copper-lined package transfer port tips 90 degrees for package delivery from the employee side to the customer side while preventing free airflow.

Safety Tip: Help customers maintain proper social distancing between individuals by placing floor markers at 6' intervals within your queuing areas.

Antiviral

Safer Proximity

Protection

Better Health

- All-in-one design with HIPAA-compliant talking port that facilitates audibility
- Free standing, easy set up for all personnel
- Simple to use
- Clear plastic partition with side surround panels and polished edges
